DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Jansen et al. (US 5,528,106)

Regarding claim 1, Jansen ('106) teaches in figures 2 and 3 and the corresponding text, an electric lamp comprising: a lamp vessel (1) with a space which is closed in a gastight manner and in which an electric element is arranged; at least one seal (4) through which at least two electric feed-throughs (5) are passed, which feed-throughs (5) extend from the electric element to outside the lamp vessel; each feed-through comprising a respective metal foil (6) embedded in the seal, which metal foil

has a foil surface bounded on either side by a knife edge, the knife edges extending at least substantially along a longitudinal axis of the lamp, characterized in that the foil surfaces of the feed-throughs present in one and the same seal are situated in different planes (read "The metal foils 6 each lie in their own plane parallel to the axis 3 of the lamp vessel 1", see column 3, lines 4-5).

Regarding claim 2, Jansen ('106) teaches the foil surfaces are oriented parallel to one another (read "The metal foils 6 each lie in their own plane parallel to the axis 3 of the lamp vessel 1", see column 3, lines 4-5).

Regarding claim 3, Jansen ('106) teaches the foil surfaces are arranged opposite to one another.
